Abstract

Key words: *Open Source, Open Access, Quantum Mechanics, Free Software*

Many scientists complain that they cannot do research because universities do not provided them the opportunity to work with scientific software, laboratories and etc. This report aims to present a brief overview of some kind of free software, the ideology of Open Source and Open Access. We will do a short review of some free servers which can solve scientific problems. It will be presented the application of quantum mechanics using free software. We hope through this article to help these scientists and show them the possibility that science can be done with the mind, heart and cell phone with Internet.
